Phototherapy eye protectors are placed over the baby / infants eyes to prevent extremely harmful ultraviolet light from baby's eyes whilst being treated for jaundice.

The eye protector is easily secured over the eyes with a hook and loop securing strap which goes around the back of the head and another strap over the top of the head.

- Can be easily cut to size for custom fitting of the baby
- Independent light transmission tests show that Clairemed Eye Protectors blocks out more light than any brand in use
- Materials utilised are soft brushed nylon, latex free total block out
- Special non allergic fabric lies against baby's face
- Single Use
- SABS Approved
